

Overview: NODIS is a core technology startup company. NODIS makes a smart glass film – a nanoparticle-based, nanoimprinted clear film that when a voltage is applied changes transparency (tint), color and infrared control (to control heating from the sun). NODIS partners with leading flat glass manufacturers to transform the way comfortable, energy-efficient spaces are created. As the importance of sustainability grows and governments around the world set higher standards for energy use and CO2 emissions, NODIS anticipates even greater adoption of this innovative smart glass technology. NODIS is establishing North American operations and has located its corporate HQ and production facilities in Worthington, OH.

Position Summary: We are looking for a qualified Lab Technician to undertake various laboratory responsibilities of technical nature. You will be handling equipment to analyze samples and conduct tests, reporting findings to a laboratory manager. The ideal candidate will have experience working in a lab environment, preferably in a polymer lab. He/She will be well-trained to maintain safety conditions and will be passionate about doing work that makes things move forward. The goal is to succeed in producing reliable and essential results that can be used to make a difference.

Responsibilities

- Perform lab tests on smart glass films including, color measurement, infrared spectroscopy, and UV spectroscopy.
- Perform UV and Xenon weathering tests on film samples.
- Operate nanoparticle sample fabrication
- Manage electronics lab, equipment.
- Work with engineers on production quality issues
- Assist with product development when needed
- Fabricate smart glass film samples
- Maintain accurate records of all tests conducted
- Comply with policies and procedures
- Complete all other projects and duties as assigned

Skills

- Must possess a high school education, preferably an associate degree with a concentration in chemistry, applied science, technology, and engineering
- Proven experience as Lab Technician or relevant position
- Ability to read and write the English language
- Proficient in basic mathematics and able to use data processing software, e.g., Excel
- Preferably have 2-5 years of experience with chemical companies or labs
- Ability to organize, prioritize, and work within deadlines
- Must have good communication skills, both verbal and written
- Willingness to work overtime when required
